(a) sharp bound on α
identity
sep = 0
sep = 1
sep = 2
sep = 3
$V(P)$
collective share α
(b) rejection at $\alpha = 0.10$
separated (sep = 3)
partial (sep = 1)
mimicking, heterog. effect
perfect mimicry
rejection rate
experiment size n
(c) information loss
sep = 0 (mimic)
sep = 1.5
sep = 3 (separated)
identified-set width
collective share α
